Subject: DSP-12 users/programmers
To: ham-digital@ucsd.edu

I have been using an L.L.Grace DSP-12 for about a year now and am
happy with it. It is a very powerful piece of equipment and is under
utilized with it's present firmware. Is anyone doing any programming
for this device? Is firmware version 2.0 the latest? Is the AEA DSP
unit programmable and if so are programs written for it compatible
with the DSP-12? Any info or opinions welcomed.

Thanks
Bruce N4USH

To: ham-digital@ucsd.edu

Well, we've had the info-address for the Ottawa PI posted.. so, does anybody have an email address to which I can write for information on the GRAPES modem? I've tried

Doug, kd4nc gatech!gt-eedsp!kd4nc!dug

which was given in the packet_misc file in the ARRL archives, but the address doesn't seem to be valid anymore. (and yes, I know how to handle UUCP addresses) So, anybody have a new one?

-Matt

In article <2tg2au\$959@eldborg.rhi.hi.is>, bnt@rhi.hi.is (Benedikt Sveinsson) writes:

Hi Benedickt,

I'm not sure about setting up an Internet Gateway to Packet, but if you have access to Internet at all, a number of HAMS in the US will put messages on the INTERNET in compressed format. When unzipped, these can be directly imported into FBB.

I'm not sure if this will help, but if you are interested, let me know and I'll get some of the info where these are available by anonymous FTP.

Subject: Looking for nord<>link firmware
To: ham-digital@ucsd.edu

Hello,

I am now looking for the rom image of the nord<>link firmware software.
It seems that it is wa8ded compatible software with lot's of extra's.

Can anyone point me towards a ftp site or shop (preferably in europe) where
I can get such a rom (or image only, I can burn the roms myself).

many thanks in advance....

The Netherlands, June 23, 1994.

Hello dear reader,

Today I distributed NET_Mac2.3.41.sea.hqx...

For those who don't know NET/Mac... NET/Mac is the application that
supports TCP/IP over packet-radio, which means, that hamradio operators
can use NET/Mac for their wireless TCP/IP network...

In this version of NET/Mac I implemented the following:

- Allow recording of finger-sessions to a file
- Mods to prompt for username and password (FTP)

- Truncate hostnames that are too long to be printed
- Fixes for AddResMenu() bug in System 7.5
- Password-protect 'remote <hostname> reset' command
- Make sure NET/Mac doesn't leave a watchcursor on the screen
- Change double linespace to single space in TRACE-files
- Create new TRACE-files only when the traceflags are nonzero

This version obsoletes all versions of info-mac/comm/net/radio-netmac in the Sumex-Aim archives.

The new NET/Mac has (hopefully) been uploaded to:

- 1) ucsd.edu, to the directory hamradio/packet/tcpip/incoming.
If it's not there then look at hamradio/packet/tcpip/mac.

It may have also been uploaded to:

oak.oakland.edu, to the directory pub/hamradio/mac/digital

Kind regards,

Adam PA2AGA (e-mail: adam@iag.tno.nl)
(or: pa2aga@iag.tno.nl for letters only, NO BIG files here)

This is documented in the manual for the software.
Check your autoexec.bat for a set command that sets
the variable "TZ".

What's packet radio and how does it work? Does it let you connect to the
internet? Is it expensive?
